

Product Features:

The CTF-T6C combines a programmable timer, relay, and six-circuit fuse panel into a single compact unit, simplifying installations that require more than 30A of timed power. Upgraded from the previous generation, it features a 100-amp maximum load, an integrated reset circuit, a two-position ground bus, and a protective fuse panel cover for a cleaner installation. The field-programmable timer supports a wide range of fleet applications while protecting onboard IT and communication equipment with Low Voltage Disconnect and timed power control. Requiring only 5 mA of standby current, the CTF-T6C helps preserve vehicle battery life without sacrificing system readiness.

Recommended Applications:

The timer keeps critical vehicle systems powered after the ignition is turned off, helping law enforcement and fire fleets maintain communication and operational readiness. For law enforcement, it keeps laptops, routers, VPNs, GPS, radios, and recording equipment active for secure data transfer and rapid response. For fire and EMS vehicles, Infinite Mode keeps radios, computers, and other essential devices in standby so they are ready the moment a call comes in. Built-in diagnostic LEDs simplify troubleshooting by identifying timer status and electrical faults, reducing maintenance time.

Technical Data:

- 100A Maximum Load
- 6 Timed Hot Circuits, 30A max each
- 16 Timed Intervals
- 2 Diagnostic LEDs
- 2 Position Ground Bus
- Dimensions: L 6.006", W 3.570", H 1.577"
- Weight: 0.538 lbs
